Description

The Akyga® AK-PD-12 is the perfect alternative to a faulty power supply **for the Xbox 360E console**. It features **12 V / 9.6 A (120 W)** and a special connector that is fully compatible with selected console models from Microsoft. The built-in quiet fan effectively dissipates excess heat, protecting internal components from overheating. So you can enjoy uninterrupted gaming for hours on end!
There is an **LED** on the side of the power supply, which, like the original model, indicates the current operating status of the device. A red light indicates that the power supply is ready for use, while a green light indicates that the power supply is functioning correctly when connected to the Xbox 360E console. In addition, the power supply is equipped with a standby mode that minimises power consumption when the console is not in use.
A **power cable** is included to conveniently connect the power supply to an outlet.
